Improving the use of energy in buildings is another important way to save energy. The political agreement on revisions to the Energy Performance of Buildings Directive in December will help the building sector reduce its energy consumption and make buildings greener. These revisions set out a range of measures to help EU governments boost the energy performance of buildings, with a specific focus on improving the worst-performing buildings.

Energy savings are achieved not only by using less energy and using it more efficiently, but also through the design of everyday products and appliances by manufacturers. The new EU ecodesign rules specify that electrical appliances should use less energy in standby mode, giving manufacturers 2 years to improve their products' performance. Tumble dryers, local space heaters, mobile phones, tablets and industrial fans are among the products subject to the new or revised, and stricter, rules. These changes will be reflected in the EU energy label, which continues to be widely recognised and used by consumers in the EU.

The EU aims to make sustainable products the norm. Towards the end of the year, the Parliament and the Council reached an agreement on the Sustainable Products initiative, proposed in March 2022, which challenges the traditional 'take-make-dispose' consumption model. The initiative aims to ensure that products are built to last, thereby decreasing waste and conserving resources.

Three handwritten signatures are visible on the page. One signature is located at the top center, consisting of two loops. Another signature is located to the right of the first, featuring a stylized 'M' followed by a vertical line. A third, larger signature is located at the bottom center, appearing as a single continuous line.

Concorso pubblico, per titoli ed esami, per la copertura di n. 1 posto di Dirigente di II fascia per le esigenze dell'Area Risorse Umane e Affari Istituzionali, da assumere con contratto di lavoro subordinato a tempo indeterminato e pieno – codice concorso Dir-Risorseumane-2023

Several new energy infrastructure projects completed over the last 2 years have also helped the EU to secure alternative sources of gas supply. Examples include the Baltic Pipe and the Interconnector Greece–Bulgaria, along with new terminals for liquified natural gas in various Member States.

In November, the EU took another step towards making the EU's energy system fit for the future by publishing the first of its lists of Projects of Common Interest to be fully in line with the European Green Deal. It is set for formal adoption in early 2024. Published every 2 years, the list contains projects that will improve the interconnectivity of the Member States' energy systems. The projects can benefit from accelerated permitting procedures and funding. It is the first list under the revised Trans-European Network for Energy Regulation to exclude fossil fuel projects and include hydrogen and electrolyser projects. It also includes projects that will link the EU's energy system with the United Kingdom, the Western Balkans and North African countries.

Three handwritten signatures are present in the bottom right corner of the page. One signature is a stylized 'MS', another is a more fluid cursive script, and the third is a simple 'A'.

The energy sector – heating of homes, powering industry sectors, and transport – is responsible for almost three quarters of global greenhouse-gas emissions. This means that reducing energy consumption makes a big difference in the fight against climate change. The EU wants to reduce its emissions by at least 55 % by 2030 (compared to 1990 levels), as set out in the European Green Deal (see Chapter 3).

In the winter of 2022/2023 – thanks to milder weather and the joint efforts of the EU, its Member States, individuals and companies – gas consumption in the EU fell by 18 % (or 53 bcm). However, to keep a careful balance between energy supply and demand, voluntary measures to save energy are still needed. The emergency regulation on reducing gas consumption (originally agreed in July 2022, has therefore been extended. The aim is to reduce consumption by a further 60 bcm between April 2023 and March 2024. Other emergency rules from 2022 on the market correction mechanism, solidarity rules and permitting have also been extended to guard against further problems.

Three handwritten signatures are present: a large, stylized 'GZ' at the bottom left; a signature starting with 'Ons' in the middle right; and a smaller, slanted signature to the right of 'Ons'.
